

Auxiliary battery pack 90 Ah with BPC

Ready-to-install and powerful auxiliary battery with its own recharging option.

// Compliant: Meets the requirements of most vehicle manufacturers
// Ready for installation
// Compatible: Optimised for EURO 6 vehicles

Modern commercial vehicles rarely manage without additional electrical consumers (e.g. lights, tools or computers) in the vehicle body. To supply these reliably, a powerful auxiliary battery with its own recharging option is required - a complex challenge for vehicle manufacturers and fitters.
The auxiliary battery pack is a ready-to-install all-in-one solution and, thanks to its compact dimensions, it fits easily under the passenger seat, for example. The core of the package is a 90 Ah AGM battery and the DC-DC charge booster developed by LEAB, which ensures a permanent and optimum charge of the battery even in EURO 6 vehicles with generator management. The package is already adapted to the requirements of many vehicle manufacturers and thus requires no further testing.
A complete set of cables and a matching battery holder support simple and safe installation.
The auxiliary battery pack is already adapted to the requirements of many vehicle models (from MY 2019), e.g. Renault Master III, Opel Movano, Nissan NV400.
Note: The additional battery pack can only be fitted in vehicles that include a passenger double bench seat.

Technical Information

Battery capacity	90 Ah
Nominal voltage (battery)	12 V
Type of battery	Lead acid (AGM)
Dimensions (L x W x H)	353 x 175 x 190 mm
Weight	27 kg

*In the chosen option
